WATER SAVING URINAL SYSTEM

Saving water. Saving our waterways.

greenheart™ - safe for you and the planet

We think the world not only deserves a safe urinal system, but that you do too. Who wants to handle and breathe in all those toxic chemical cleaners anyway? Keeping this Greenheart urinal system in good working order is a breeze, its so easy to use and pleasant to work with. So take good care of it and it will take good care of you. Your planet thanks you!

5-STEP DAILY CARE & MAINTENANCE GUIDE

- 1 WET** - Use a watering hose or can or the cistern flush to wet urinal surface and purge urinal waste trap of the previous day's contents. Use approximately 10-15 litres of fresh cold water.
- 2 SPRAY** - Using the Greenheart atomising spray bottle, spray pre-diluted Greenheart Washroom Wizard liberally over the entire urinal surface and surrounds. Normal dilution rate is 20:1 (40ml's in the Greenheart spray bottle)
- 3 AGITATE** - Agitate with a brush, scourer or cloth, paying particular attention to the drain cap, step, trough, floor, corners and outside bottom of wall urinals. You should remove all marks and stains.
- 4 RINSE** - Allow to stand for a few minutes before rinsing again with fresh cold tap water to wash away residue. This will move the cleaner down into the drain where it will continue to work. Run at least 10 litres of water directly into the drain to purge it of organic matter.
- 5 REPLACE** - Replace any Greenheart Watersaving Pucks that have dissolved to about the size of a 20¢ piece. The pucks should be evenly spaced throughout the urinal at 60cm intervals.

DAILY CLEANING INSTRUCTIONS

Follow this simple guide and help keep you and the planet safe!

REMEMBER!

- DO NOT** use any other chemicals or cleaning agents
- DO NOT** use hot water
- DO NOT** pour mop buckets into the drain
- DO NOT** allow contaminated run-off to enter the drain
